

## DESIGN BRIEF

The clients for this project are the Swanson family. Eric and Julie are in their early 40's. They have two children, aged 8 and 10. Three months ago they sold the large suburban home they had been living in over the past 5 years and moved into a more established community closer to downtown Calgary. They wanted to be closer to work, after school care, as well as the various organized sports activities that their children are beginning to get involved in. They found this 1960's split level house in one of their ideal neighborhoods and although it was quite a bit smaller than their previous house, they are prepared to make this home work because of its location. The Swansons want a real family home with a large informal living area that combines kitchen, dining, and various living activities into one big space. Beside a now outdated kitchen renovation sometime in the 1980's the main floor is in original condition. The upstairs bedrooms and bathrooms are also in need of an upgrade but for budgetary reasons, this work is a lower priority for the time being.

This is the Project Documentation Package for Part One of this week's *Design Project*. The goal of the *Design Project* exercises is to learn about the design process for making an existing home more Simple, Light, and Open. Review the Design Brief in this documentation package to understand what the client needs and wants for their home. Use the existing floor plan to analyze how Simple, Light and Open the home is in terms of these needs. For background information on what to look for, review the Simple Light Open description on the website.

Draw overtop of the plan as you analyze the house and then write down your observations about the design and your recommendations for change. When you are ready, watch John Brown complete the first part of the Design Project and compare your results. To discuss the exercise further with John, and other participants, add your comments to the blog. In the next segment we will be applying these recommendations to create a concept design.
